

PRIMACOVER®

BREATHABLE SEAM TAPE FOR COVERING MATERIALS

For
exposed concrete,
natural stone, cast

PrimaCover Airtape

breathable seam tape

PRIMACOVER®

Airtape

For covering materials on sensitive substrates.

PrimaCover Airtape has been specially developed to securely join vapour-open and breathable surface protection materials (such as PrimaCover Active, Ram Board and PrimaCover Defend). The breathable micro-dot adhesive layer allows the surface to evaporate and/or cure without any problems, while the protection materials remain securely in place.

Properties:

- ✓ Material: breathable PP non-woven
- ✓ Adhesive: synthetic rubber
- ✓ Water permeability: 10 l/m²/min
- ✓ Air permeability: 750 l/m²/min
- ✓ Tensile strength: 70N/25mm
- ✓ Temperature resistance: min. -20°C / max. +80°C
- ✓ Unique microdot adhesive layer
- ✓ Dimensions: 50 mm x 33 m

Important: PrimaCover Airtape should always be applied to the protection material and not directly to the surface to avoid adhesive residue and damage.
